DIRECTORATE OF INTELLIGENCE	
19 November 1985	
ARGENTINA: Current Weapons Requirements and Possible Suppliers	25 X
Summary	
The Argentine military is slowly recovering from the Falklands debacle of 1982 and is looking seriously at its weapons requirements for the late 1980s. the Air Force's primary concern is the acquisition of new tighter aircraft and the retrofit of its existing inventory. Navy leaders are concentrating on upgrading air/sea rescue operations and anti-submarine warfare capabilities through the purchase of new helicopters. The Army hopes to procure a small number of heavy-lift helicopters to enhance its troop transport capabilities. The profile of Argentine arms acquisitions and statements by military leaders indicate that Argentina favors Western suppliers, but the Soviets may be able, over time, to exploit the Argentine military's reduced budget and status with renewed efforts to establish an arms transfer	25X 25X
relationship with Buenos Aires.	25 X
* * *	
Background	
Despite the sharp cuts in the defense budget undertaken by President Alfonsin as part of his overall national austerity program, the Argentine armed forces have not halted their efforts

equipment manufactured in the United Kingdom.	25 X
US State Department reporting also indicates that Navy officials have expressed interest in the following US-made items:	
Raytheon DE1191 hull-mounted sonar AN/ASQ-18 sonar system LVT-P7A1 marine tracked amphibious vehicle.	
Army	25 X 1
Because the Argentine defense industries produce many of the items needed by the Army, its foreign procurement requirements are minimal. According to the US Embassy, the Army is seeking an unspecified number of US-built Sikorsky UH-60 Blackhawk helicopters for troop transport. A likely alternate choice would be the French Aerospatiale Super Puma. According to an outgoing State Department cable, the Army is also interested in other US equipment such as the Bell 206B helicopter with combat configuration and the M-113 family of armored personnel carriers. The Armyas well as the Navy and Air Forceis also seeking US training through credits and grants to offset the current cutbacks in the domestic defense budget.	25X ⁻
<u>Funding</u>	
Funding for new weapons procurement contracts is likely to remain a problem for Argentina. The military's 1984 budget only allowed for payments on equipment contracts that had been negotiated by the previous military government. The 1985 budget has still not been approved, but press reports speculate that, once again, very little funding will be designated for weapons procurement. The armed forces hope to supplement any alloted procurement funds with revenues from sales of equipment now in their inventories, but there has been little interest shown in these offers. If Buenos Aires does not negotiate any successful sales agreements in the near future, financing for new military purchases will have to come from changes in budget legislation, discretionary funds at the disposal of the President, or easy credit terms offered by suppliers.	25 X
Coproduction Agreements	
Argentina's defense industries are also suffering from the budget cutbacks, and President Alfonsin is placing new emphasis on arms exports to generate needed income. The current industry offerings, however, have not done well on the international arms market and defense production officials are pressing Western nations for agreements to coproduce more marketable weapons. Argentina has approached the Italians for possible coproduction accords. The Defense Ministers of Argentina and Italy signed a military cooperation agreement in early September, according to press reports, whereby Rome will provide technology for the development and production of unspecified military equipment.	051
USSR: Wooing the Argentine Military.	25X ⁻

)
	Over the years, Moscow has made numerous unsuccessful attempts to expand its South American military equipment sales beyond Peru. Seeing Argentina's difficulty in securing Western materiel and wishing to balance its trade with Buenos Aires, Moscow may work harder to lure the Argentines into a military relationship. Moscow has renewed its	
	longstanding offer to sell military equipment—including fighter and transport aircraft—to the Argentine armed forces,	2
	Strings Attached. One of the more recent overtures occurred last November when,	
	the Soviets offered to sell the Argentine Air Force 30 to 36 MiG-23 or MiG-25 fighter aircraft. The USSR offered attractive credit terms and guaranteed to underbid	
,	the price of any comparable fighter on the international market	
	however, Moscow placed severe conditions on the sale, stipulating that:	
	All Argentine officer and NCO training must take place in the Soviet Union.	
	 Argentina must offer Moscow all of its agricultural exports before placing them on the international market. 	
	 Buenos Aires must permit a large Soviet support mission, including pilots, to be stationed in Argentina. 	
c	Buenos Aires was unresponsive, and Soviet officials have since adopted a more low-key approach, including promotional demonstrations of at least two types of transport aircraft in Argentina.

We believe that Buenos Aires will continue to resist Soviet offers of combat arms at least over the near term. Argentina's need to reduce its trade imbalance with Moscow may spur military-related purchases from the USSR, but they are likely to be restricted to dual-use or low-technology items that would not require Soviet training or maintenance. Argentina may, however, threaten to purchase Soviet combat weapons to pressure the United States to act on pending transfer issues. Over the longer term, however, if Argentine military equipment and capabilities continue to deteriorate at the current rate, and financial strictures endure, Buenos Aires is likely to consider Soviet offers more favorably.
